

Kleeschulte Vegetable Grow Bags medium or coarse

Product description:

Kleeschulte Vegetable Grow Bags medium or coarse contain special substrates for the professional production of vegetables such as cucumbers, tomatoes and bell peppers in greenhouses.

The well-balanced combination of the sustainably produced Kleeschulte wood fibre topora® and the mineral additive Perlite ensures an ideal growth of plants.

As the substrate contains 100% organic and mineral components, no disposal costs arise.

Application and characteristics:

- The RAL quality-assured wood fibre topora® ensures an excellent rewettability without wetting agents having to be added.
- Due to its good pore volume, it provides for sufficient air in the root area even when the plants have longer culture periods.
- Kleeschulte Grow Bags are characterised by their structural stability in the substrate.
- The Perlite® portion of the substrate increases the excellent water storage capacity and rewettability. The water does not drip off, but can be absorbed at once. As a result, the watering intervals can be adjusted as required.
- The optimum pore volume guarantees fast root penetration in the substrate.
- No disposal costs because it is 100 % compostable.

The Grow Bags consist of UV-resistant film (remains stable for 2 years when exposed to strong sunlight).

The little weight of the **Kleeschulte Vegetable Grow Bags** contributes to the utilisation of transportation capacities in an ideal way.

Kleeschulte Vegetable Grow Bags medium are made for the production of tomatoes (with Perlite® 0 - 3 mm)

Kleeschulte Vegetable Grow Bags coarse are made for the production of cucumbers and bell peppers (with Perlite® 2 - 6 mm)

Nutrient content:

pH-value: 5,2 - 5,4

Salt content: 0,06 g/l

N: 0 mg/l

P₂O₅: 0 mg/l

K₂O: 0 mg/l

Units of delivery:
1,00 m Grow Bag: 23 litres
156 bags/pallet
1,20 m Grow Bag: 27 litres
156 bags/pallet

- for optimum root growth
- excellent structural stability
- high buffer capacity
- no substrate disposal costs
